

Bio-Metric Solutions

In recent years, the use of Internet technologies for delivering educational content has significantly grown, and online learning has evolved into a popular method of education.

Online examination is a vital component of distance learning. Assessments are typically conducted remotely, without any face-to-face interaction, making candidate authentication a critical challenge.

Sai Educare has taken on the challenge of addressing potential threats to candidate authentication in online examinations and continually works to enhance mechanisms for securing the examination process. Authentication of candidates remains a significant challenge in offline examinations as well.

Sai Educare offers comprehensive solutions and supports the use of biometric devices to authenticate candidates in both online and offline examinations. We provide biometric entry for candidates upon client demand in online and offline exams, and we can also integrate Aadhar Card-based biometric solutions if needed.

To ensure robust authentication, Sai Educare employs modern biometric devices. Our team of technical experts is fully trained and equipped to handle various biometric technologies, including fingerprint scanners/readers, cornea detection kits, and facial recognition devices.
