

# CBT - Computer Based Test

## Introduction

A Computer-Based Test (CBT), also known as online testing, utilizes computers instead of traditional pen-and-paper methods for assessments. This approach allows tests to be conducted either online via the internet or in computer-equipped facilities. Organizations commonly use CBT to evaluate candidates' performance, skills, and capabilities efficiently. By incorporating features like multiple-choice questions, descriptive answers, and analytics-based questionnaire. Overall, CBT enhances assessment reliability and facilitates informed decision-making in educational and professional settings. At Sai Educare Private Limited, we specialize in providing end-to-end services for computer-based tests (CBTs). Our mission is to deliver seamless, secure, and efficient examination solutions tailored to the unique needs of educational institutions, government agencies, and corporate organizations.

## What We Offer

Comprehensive Exam Solutions

- End-to-End Services: From setting up infrastructure to managing the entire examination process, we handle everything.
- Customizable Solutions: Tailored services to meet the specific requirements of each client.

## Infrastructure and Technology

- State-of-the-Art Facilities: Fully equipped computer labs with modern hardware and software.
