

# Frisking

Sai Educare ensures comprehensive exam security through a blend of advanced facial recognition technology and physical measures such as metal detector frisking. This integrated approach detects unauthorized items candidates may attempt to bring into exam venues, ensuring a fair and secure testing environment. Frisking with metal detectors is a standard practice aimed at preventing cheating and preserving the integrity of the examination process.

With the increasing use of paper chits and miniature gadgets facilitating cheating during exams by enabling communication with external sources, frisking serves as a crucial frontline defense against such activities. Sai Educare employs highly trained professionals equipped with advanced metal detectors to effectively combat this challenge, promoting fairness within the education system.

At Sai Educare, we prioritize innovation and timely delivery of high-quality solutions. Our research efforts are dedicated to mitigating internal risks and maintaining exam integrity. Whether it's establishing robust infrastructure or ensuring top-tier examination facilities, Sai Educare maintains a competitive advantage in the industry.
