

Physical Security

Sai Educare provides comprehensive security services for examination processes nationwide. Our approach includes dividing security personnel. Guards (Male and Female): These guards are stationed at examination venues to conduct frisking, checks, and monitoring of candidates.

Physical security is essential for safeguarding facilities, equipment, and resources, as well as ensuring the safety of personnel and property from various threats such as theft, espionage, or attacks. The goals of physical security systems for protected facilities typically include:

- Controlling the candidate crowd
- Maintaining discipline among candidates
- Deterring potential intruders through measures like warning signs, security lighting, and perimeter markings
- Detecting intrusions and monitoring intruders using tools such as intruder alarms and CCTV systems
- Promptly responding to incidents through security guards and police interventions.

Physical security relies on multiple layers of interconnected systems, including CCTV surveillance, security guards, protective barriers, locks, access control, perimeter intrusion detection, deterrent systems, fire protection, and other mechanisms designed to protect individuals and property.

Sai Educare ensures the implementation of robust physical security measures to uphold the integrity and safety of examination processes across the country.
